

Shopping mall

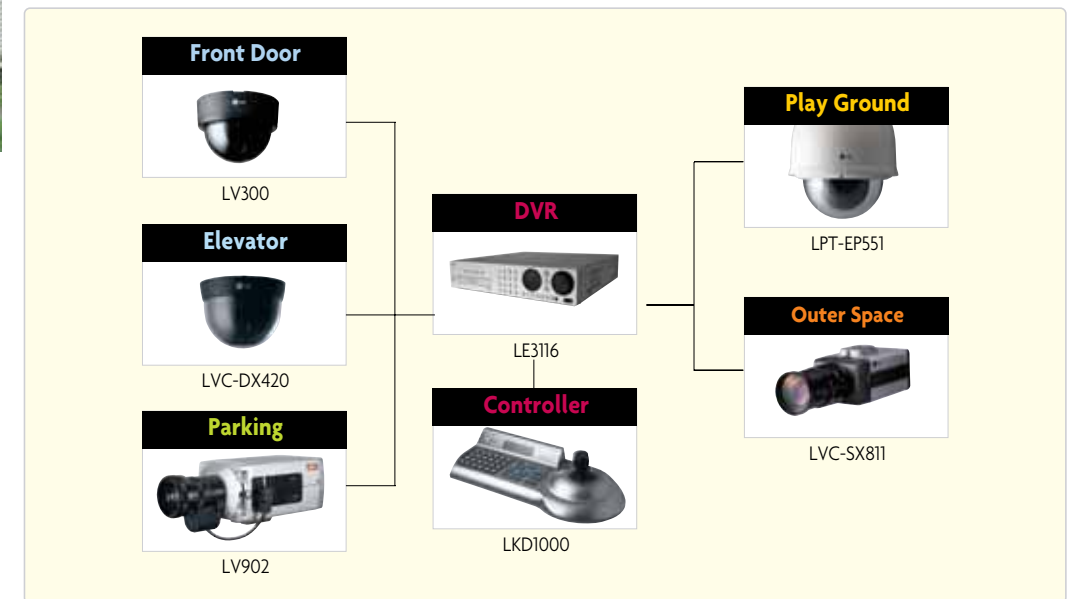

In shopping malls, surveillance system protect theft of goods and accidents aroused by customers, help marketing activities by checking product display status and customer movements, and accelerate operation efficiency by observing car movement.

Residential Areas

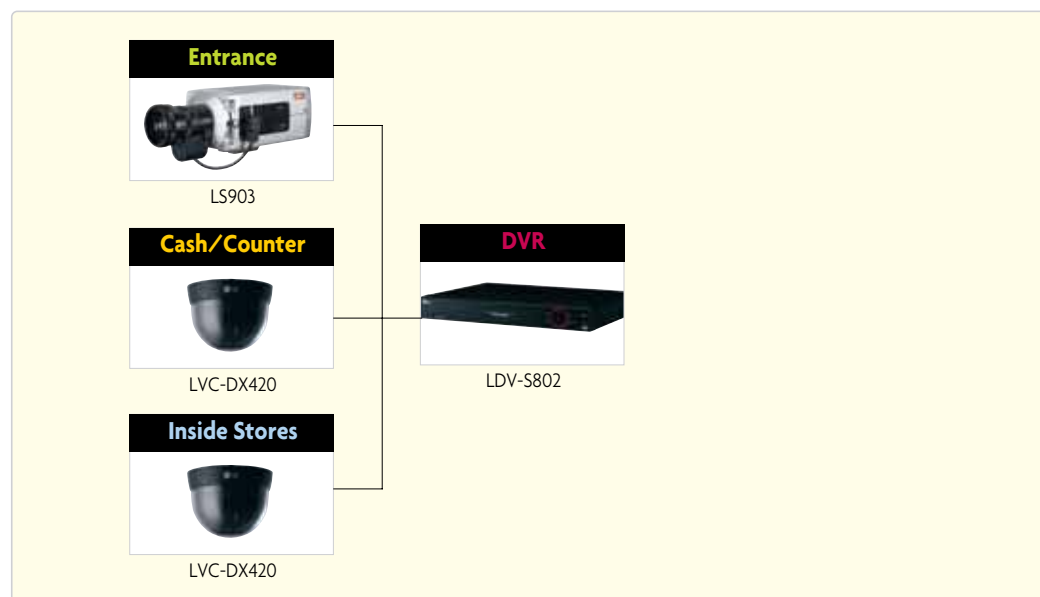

In residential areas, surveillance system protect robbery, theft and illegal entrance of automobiles. The system can replace human resources for residential management and therefore reduce management expenses.

Small Businesses / Retail

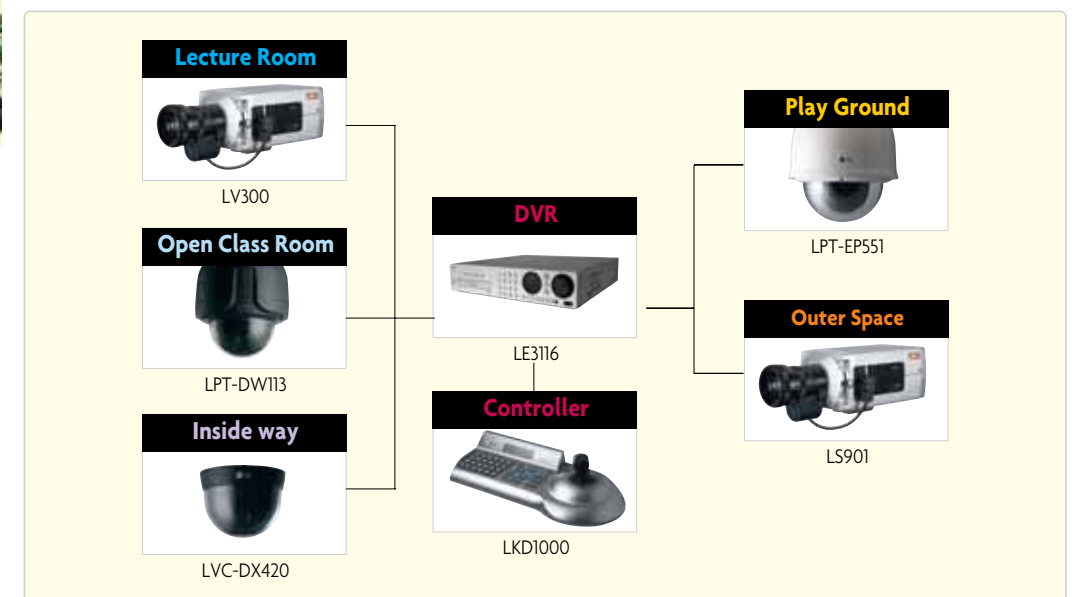

Monitoring restaurants can help increase the sanitary level in the kitchen, monitoring convenient stores will help protect theft, check products, when there is a rush of customers, also monitor part - time workers , and may help even prevent unexpected accidents.

Education / Public Institution

In education place such as schools and private institutes, surveillance system protects unexpected accidents, thefts and crimes. Lecture room can also bemonitored by those who may want to study on-line.

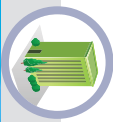

Manufacturing

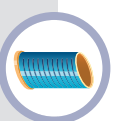

For industrial facilities, surveillance systems check the operations of automatic machines, monitor visitors at entrances, observe progress in production, provide unmanned security around factories and prevent incidents in outer spaces.

Commercial

In commercial buildings, surveillance systems monitor people who enter buildings, staff movement within buildings and other situations, and monitor escalator / elevator operations to prevent accidents. And it helps to observe traffic and other situations in order to prevent any incidents inside and outside of car parking spaces.

Transportation

Surveillance systems detect illegal parking, crosswalk and crossing in improper traffic signal.

Finance

In financial facilities, the surveillance systems are mainly used for observing entrances, areas where cash is handled, vaults, customer protection, parking spaces and surrounding areas in order to prevent accidents. Suspect's appearance can be recognized and the incident dealt with quickly.
