

Video Diva

Elegant. Technological invaluable.... Comelit reinvents the internal unit and designs it as exclusive in its shape and functions. Hands-free DIVA is the "custom-made" article of the sector: from its design to the materials used, from its structure to its controls.

Hands-free DIVA can be transformed rapidly in the desk version thanks to a special and original base, made in harmony with the design of the instrument.

Diva has a high resolution 3.5" LCD display; the absence of a handset makes it use extremely easy and convenient. Diva has a "privacy" pushbutton with a special circuit which allows the call tone to be temporarily excluded (during the night or at weekends).
