Protégé LCD Touch Screen Keypad

Sophistication and ease of use for the most discerning industrial, commercial or home installations.

A seamless user interface to your integrated access control, automation devices and security.

The Protégé Touch Screen Keypad is the ideal solution to creating an outstanding user experience. Eliminate the need for a myriad of keypads, control panels and switches for each part of a system and create true integration in any building environment.

Feature Highlights

- 12VDC power supply input with low current technology
- Communication with the Protégé Integrated System Controller by Ethernet
- 2 monitored zone inputs or 4 with duplex zone operation
- 5.7" LCD Touch Screen
- 1 programmable open collector output, suitable for digital or relay control
- 10/100 Ethernet with link / data status indicator
- VGA Resolution (640 x 480)

Mounting Options

With a thickness of only 18mm, the Protégé Touch Screen Keypad complements any building interior. The keypad can be mounted over a traditional flush box mount requiring only 15mm depth inside the wall cavity.

Installation Wiring

Power provided to the Protégé Touch Screen Keypad is via a suitable 12V DC power supply. An RS-485 interface is available through a breakout interface for interconnection of third party automation products. Ethernet connection to LAN allows for star configuration networks using a suitable Ethernet switch.

Protégé Control

Use the keypad to create custom menus and displays that allow control and viewing of any inputs and outputs in the Protégé System. Create floor plans to display this information, and even update system programming from the touch screen. View event logs with full details, all in the same screen.
